NOTES:

As is well known, Axson was taken over by Sika and therefore Sika has Prolab and SikaBlock in its product range. Obo has taken over the production and distribution of Huntsman with Renshape for Europe and, in addition to Obomodulan, also distributes Renshape.

The list also includes products from competitors that we do not offer, and vice versa.

With the higher densities there are several multiple assignments of competitive materials to NECURON®, as the technical data cannot be assigned 100% to our product. For some products, Obo does not specify a defined density, but only density ranges, so here, too, one product can be assigned to several NECURON® products.

This overview is only intended as a guide. It always depends on the requirements of the individual applications with regard to the technical data.
